

*“Science is simply the word we use to describe a method for organising our curiosity”.*

Scientists have rightly said that Science and everyday life cannot and should not be separated. It is Science that enables us to develop knowledge of the facts, laws and the processes of nature. The celebration of **Science Month** in April aimed to foster scientific temperament in the students as they venture forth in their educational journey.

No Science Month Celebration can be complete without a **Science Quiz**. Hence the most looked forward to event was left for the last. It was an inter- house group competition which was very well prepared and fought for by each group. The participating students gave brilliant answers to numerous questions related to animal or plant kingdom, the universe, health and nutrition, pollution, scientists and their inventions etc. It was an equally engrossing and educational experience for the audience who got many chances to answer queries. In the end it was the **Crashing Comets** (Jagriti House) which held their nerves better and showed more presence of mind that became the winner! The Crashing Comets team comprised of Harshit Yadav (III – A), Kunal (IV – C) and Shwetank Agrawal (V – A). And the **Galaxy Blasters** (Kirti House) comprising of Riddhi Gupta(III-A), Parth Chitlangia (IV-A) and Tanishq Awasthi (V-E) came a close second. But the real winner was Science which captivated these young minds and unleashed in them a desire to know more about our bodies, our environment and the universe. The celebration of **Science Month** was a humongous success.
